

# CREATION RESEARCH DVD's YOU WILL FIND HELPFUL ON THIS SUBJECT

This Science program, filmed at Griffith University Fellowship (Australia) gives proofs of Creation you won't be able to deny, plus answers to questions everyone needs - where you came from; why you're here and where you're going! Especially helpful to those who doubt there is a Creator who cares. 1 hour.

Charles Darwin was forced to admit the fossils didn't help his evolutionary theory at all. Nearly one hundred and fifty years later, the fossils still point to creation.

This 40 minute documentary has been very successful in public high school classrooms.

## SUMMARY

Darwin's Finches, the Peppered Moth and Sickle Cell Anaemia are all examples of Natural Selection. But in no situation has any evolution been involved. In the case of Darwin's finches - no new species have evolved and no mutation seems to be involved. Any adaptation seems to be the result of an inherent ability built into the genes. This also seems to be true for the peppered moth. With sickle cell anaemia the apparent slight benefit of some resistance to malaria is far outweighed by negative effects of the sickle cell disease.

Scientific scrutiny of the three historic foundational **proofs** of evolution - Darwin's finches, the Peppered moth, and Haeckel's embryo diagrams has caused them to collapse. In addition, sickle cell anaemia has been shown to not be a good mutation by those who work with the disease and no-one has yet presented evidence that mutations improve living things.

This means you are free to ask some or all of the following questions.

What about other claims of evidence for evolution, eg. fossils, the ape men, millions of years, extinction, etc?

If evolution is not true, what is?

If creation is true, what would the evidence be?
