WHAT NATURAL SELECTION REALLY DOES as we look at the demise of the Tasmanian Devil and the gigantic Devils that used to live on mainland Australia up until the 1400's. One of the biggest fallacies used in convincing people the Bible is false, is the concept that natural selection is evolution. Natural selection is real, but it is not evolution and this will be a key point of the DVD. We'll be looking at the degeneration of the world that's occurred since God created it very good, followed by the fall and particularly the degenerating consequences of the world post-flood.

Craig and Rachelle Hawkins (right) run a fabulous marine world Seahorse Farm in Tasmania, and you'll be hearing some of Rachelle's expertise as we not only look at both fossil and living seahorses, but the genius of God in His creation of these beautiful little creatures. Craig's M.Sc. in Forestry leads to a great section on Design in forests and Aussie native plants. Pray for Part 3 as our DVD team in Australia and the USA finalise the production of it over the next few months. It's due for release in November to coincide with the anniversary of the publishing of Darwin's book "Origin of the Species" in November 1859.

Rachelle and Craig Hawkins

During April, Craig Hawkins screened our DVD "Creation the Final Proof" to the Australian Maritime College students. Pray much for our student outreach around the world.

FOR ADVANCE ORDER
Darwin on the rocks PART 3.
Post/Paid Free

AUSTRALIA \$25 each, NZ \$25 each,
CANADA \$25 each, USA \$15 each,
UK £13.00 each.

GIANTS IN THE LAND and their demise will feature in Part 3 of the Darwin on the Rocks DVD project. Join us as we re-visit the site our Giant Fossil Roo was excavated from, and as we investigate the gigantic cousins of the wombats which have also been discovered at this site by Wayne Ritter (photo left). Part 3 will expose the real effect of Natural Selection which always produces the opposite of evolution.
