Quote: National Geographic on Fossil Record

Written by Administrator Tuesday, 16 April 2013 23:12 -

'Illuminating but spotty, the fossil record is like a film of evolution from which 999 of every 1,000 frames have been lost on the cutting room floor.'

National Geographic, November p25

Editorial Comment: When 99.9% of the fossil evidence for the theory of evolution is missing, you don't even have a good hypothesis. (Ref. fossils, evidence, theory)
